this book covers the fundamentals of drilling and reservoir appraisal for petroleum split into three sections the first looks at the basic principles of well engineering in terms of planning design and construction it then goes on to describe well safety costs and operations management the second section is focussed on drilling and core analysis and the laboratory measurement of the physico chemical properties of samples it is clear that efficient development of hydrocarbon reservoirs is highly dependent on understanding these key properties and the data can only be gathered through a carefully conducted core analysis program as described finally in the third section we look at production logging an essential part of reservoir appraisal which describes the nature and the behaviour of fluids in or around the borehole it describes how to know at a given time phase by phase and zone by zone how much fluid is coming out of or going into the formation as part of the imperial college lectures in petroleum engineering and based on a lecture series on the same topic drilling and reservoir appraisal provides the introductory information needed for students of the earth sciences petroleum engineering engineering and geoscience
